---

## EDUCATION

**Electrical Engineering High School "Nikola Tesla"**

**Sep 2019 – May 2023**

**Major:** Network and System Administration

**Cubes School**

**Oct 2023 – Oct 2024**

**Specialization:** JavaScript and React.js Development Course

## SKILLS

**Languages –**

**Programming:** JavaScript, TypeScript

**Libraries:** React.js

**Markup:** HTML5,  $\text{\LaTeX}$

**Stylesheet:** CSS

**Preprocessors:** SASS

**Frameworks:** Bootstrap, Next.js, Vue.js

## WORK EXPERIENCE

**Viver Caffé Playground | Kids Animator**

**Nov 2022 – May 2023**

- Supervised and cared for children in the playground; collaborated with a team of colleagues to ensure safe and engaging activities for up to 50 children.
- Maintained cleanliness and addressed any issues within and around the playground.

**Viver Caffé Playground | Info Desk**

**Nov 2022 – Mar 2023**

- Managed birthday party and event reservations.
- Sold playground tickets and coordinated catering for celebrations.

**Princess Puff's d.o.o | Retail Assistant**

**Aug 2023**

- Sold puff doughnuts in one of Belgrade's largest shopping malls.
- Maintained a clean and sanitary workspace to ensure a professional experience for customers.

**Cubes d.o.o | Internship – Web Developer**

**Jan 2025 – Jul 2025**

*Hybrid*

**Overview:** After completing a course at Cubes School, I was offered an internship based on my performance. This was my first real-world experience applying programming knowledge in a team setting.

### **Feb – Mar 2025 | Project: *Magical Oasis (Next.js E-commerce Site)***

- Contributed to building an e-commerce store for children's toys from the ground up as part of a 3-person team.
- Implemented secure user authentication and authorization using NextAuth.js, ensuring safe login, registration, and product saving features.
- Built a fully functional shopping cart and checkout process with smooth and enjoyable user experience.
- Followed clean code principles and reused components to maintain a scalable and maintainable codebase.

### **Mar – Jul 2025 | Mtel Switzerland**

- Took part ownership of front-end development for a large-scale telecom platform, collaborating with a mentor who handled checkout logic while I focused on component architecture, page structure, and UI behavior.
- Built multilingual pages and SEO-friendly sitemap views using `next-intl`, applying internationalization best practices across both desktop and mobile self-care interfaces.
- Created an interactive map component using `react-google-maps` integrated with a Swiper carousel.
- Developed dynamic, scroll-responsive UI sections using `IntersectionObserver` and `ResizeObserver`.
- Implemented a responsive carousel system that adapted its movement based on screen width and disabled navigation buttons when reaching the end of the scroll range.
- Refactored layout and DOM structure to support consistent animation triggers, scroll tracking, and hydration-safe rendering in Next.js.
- Applied clean code principles and reusable logic patterns to maintain a scalable codebase, participating in code reviews and adapting quickly to production workflows.
- Enjoyed collaborating closely with my colleagues throughout the project; although my internship concluded before its completion, I gained valuable experience contributing to key milestones.
